ABSTRACT :
A garden is a unity between the physical environment of cities and citizens. So that a park will be able to contribute to improve the quality of urban micro climates. Man who visit the park is certainly hoping to get something that gave him satisfaction or a particular impression. This arrangement can be obtained from the park both in terms of function and aesthetics. In its function as an open space of the city, it is definitely a good park should have specific requirements and infrastructure as a support. While the recreational function, of course, the park should create an exciting and fun atmosphere. So the park improvements should pay attention to the aesthetic values of the park as a whole. The purpose of scientific writing is to know the design of a garden landscape design refers to the components so that the park can be arranged properly so that the functional and aesthetic. After doing research and discussion, it is known that Menteng Park in Central Jakarta to apply the elements of landscape design, landscape design principles and applications with a good landscape design. This can be seen from the composition-the composition of landscape elements, both the hard material and soft material.
