Key Word : prokrastinasi, task, thesis, introvert, extrovert

ABSTRACT:
Writing his thesis for some students seems to be a scary thing that inevitably must be lived because for some people writing his thesis is considered a very tough job. Some of the factors leading to the inability of a student thesis writing related problems writing technique mastery, mastery of Indonesian, lack of reading, and not accustomed to writing. Another difficulty is often experienced such trouble finding a title for the thesis, the difficulty to find literature and reading material, limited funds, or afraid to meet the lecturers. These difficulties can eventually lead to stress, low self-esteem, frustration, loss of motivation, delay the preparation of theses and some even decide to not complete the thesis. Delays or procrastination, as is the custom in general resistance to change, because the habit of not only its own behavior, but is part of the structure is closely related to one's mental organization. There are some specific personality characteristics associated with procrastination. Personality itself has a meaning as a pattern of emotional, mental, and the response of the internal environment, including patterns of thinking, feeling, and behavior that affect every aspect of a person's life, personality is the quality that makes a person different from another, and that's what makes a person a unique person. To understand the personality problem, the experts examine and remove various theories about the personality of the various aspects of the approach. One of them is a typological approach and the trait expressed by Jung and Eysenck personality type is introverted and extroverted. Each personality type has different characteristics from each other, it eventually causes a difference in response to existing problems, including the completion of thesis work. That's why in this study to test whether there were differences of theses tasks procrastination trends by type of introvert and extrovert personality. The data was collected on students who have obtained his thesis work at least one year but not yet able to finish it. The total number of respondents of 60 subjects, which is a generation of students between 2000-2003 and aged 22-28 years. On
a scale of 58 items procrastination who tested obtained 34 valid items in the range of 0.307 to 0.708. On a scale of personality types of the tested 45 items 21 items found valid in the range of 0.325 to 0.711. Cronbach Alpha coefficient of reliability for the scale of procrastination is 0.880, while the scale of personality types obtained Cronbach Alpha coefficient of 0.751. Based on research results obtained by analysis using Mann Whitney U-Z values obtained by -3.179 with a significance of 0.001 (p <0.05), which means that there are differences in theses tasks procrastination trends by type of introvert and extrovert personality. Where is the empirical mean for students with introverted personality type and the mean of 88.77 for students with empirical extrovert personality type of 70.12 which means that students with introverted personality types have a tendency procrastination higher than students with extroverted personality types. This is because the extrovert individual performance on motor activity will be more powerful, and more quickly take the initiative in moving. Instead of individuals with introverted personality types tend to slow their motion in the motor activity of the subject description, then from this research empirically proves that the subject with the female sex has a tendency procrastination higher than subjects with gender male. Based on the force and duration of work on theses subjects obtained the results that the subject of force in 2001 and has 3 years of thesis work done tends to be higher procrastination thesis work. For how many chapters that have been developed, known also that the subject of his thesis has three chapters do tend to be higher procrastination thesis work. Whereas the highest resistance is felt the subject in the process of writing his thesis is difficult to concentrate with the task of thesis.
