ABSTRACT:
Today many companies use information systems in the form of Enterprise Resource Planning (ERP) to improve the performance of the company. ERP is the integration of data, process and planning the use of resources from an organization into a single system. The system provides the benefits of systems integration is good, speed up data access, accelerate time for data processing and management of good operations. ERP system can be developed with a variety of methods such as the building itself and using the vendor. As one example is the Village Cooperative Unit (KUD Koperasi Unit Desa) BAS cooperation that has five units of the savings and loans, electricity, property / lot, garage, minimarket. Problems faced by these cooperatives are in the process of management KUD BAS in the provision of financial reports either at headquarters or branch using Microsoft Excel. Use Microsoft Excel This is a single file makes distribution and the update data becomes difficult and making financial reports to be not on time. Also application is not optimal because of the financial data daily still manually, it is still using handwritten, it can not generate the accurate data or information. With those problem so cooperative requires a system that can help the process of making financial reports to be on time. Here the role of an ERP system is needed to resolve the issue. This research is to develop the ERP system to overcome those problems, the implementation of an ERP system using software Openbravo which is open source.
